Notice that the billing period is typically about 60 days.

Water units are typically reported in cubic feet or 100 cubic feet (ccfs). A cubic foot is 7.48 gallons. 100 cubic feet is 748 gallons.

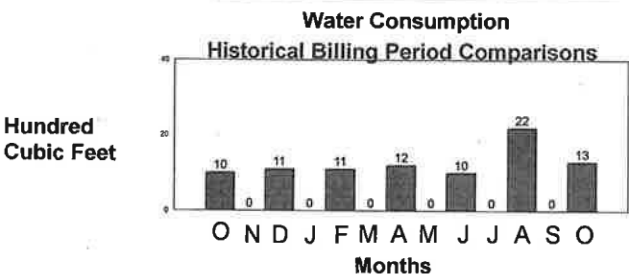

For this bill you would multiply 13 x 748 to get the use in gallons: 13 ccf x 748 gallons = 9,724 gallons.

Divide 9,724 gallons by 60 to determine the average use per day: 9,724/60 = 162.1 gallons.

Divide by the number of people in your home for the average amount of water used per person per day.

For example, if there are 5 people in your home, you would divide 162.1 gallons/5 people = 32.41 gallons per person per day.
