1 UNIT = 100 CUBIC FEET = 748 GALLONS

4th thru the 25th and closed at noon on December 31st thru January 1st.

Water units are typically reported in cubic feet or 100 cubic feet. A cubic foot is 7.48 gallons. 100 cubic feet is 748 gallons.

For this bill you would multiply 12 x 748 to get the use in gallons: 12 ccf x 748 gallons = 8,976 gallons.

Divide 8,976 gallons by 60 to determine the average use per day: 8,976/60 = 149.6 gallons.

Divide by the number of people in your home for the average amount of water used per person per day.

For example, if there are 5 people in your home, you would divide 149.6 gallons/5 people = 29.92 gallons per person per day.
