Water units are typically reported in cubic feet. A cubic foot is 7.48 gallons.

For this bill, you would multiply 5,100 x 7.48 to determine the use in gallons: 5,100 cf x 7.48 gallons = 38,148.

Divide 38,148 gallons by 60 to determine the average use per person per day: 38,148 gallons /60 = 635.8 gallons.

Divide the total by the number of people in your home for the average amount of water used per person per day.

For example, if there are 5 people in your home, you would divide 635.8 gallons/5 people = 127.16 gallons per person per day.
